rigid transformations move figures to a new location without altering their size or shape thus maintaining the conditions for the figures to be congruent if figures are congruent the

not only can rigid motions map segments into segments but rigid motions also map angles into congruent angles because of these two properties to find only the image of the vertices provides

explore translations reflections and rotations to understand rigid motions and their properties define congruence through sequences of rigid motions and apply this to angle relationships in triangles and

a rigid motion maps each part of a figure to a corresponding part of its image because rigid motions preserve length and angle measure corresponding parts of congruent figures are congruent

learning goal develop understanding of congruence by connecting it with rigid transformations pretty much this whole lesson was taken from marisa laks a big thank you goes to lisa bejarano as well

in the second lesson students formalize the language of rigid motion transformations translations

reflections and rotations and describe how a single rigid motion maps between congruent figures

figures are congruent in congruent figures corresponding sides will be congruent and corresponding angles will be congruent the last exercise illustrates how to show that two triangles are congruent

t there is a rigid motion that maps the f e triangle with one and only one vertex of the other triangle when reasoning about figures it is useful to be able to refer to rresponding parts e g sides and

in this lesson we will use rigid motions to prove mathematical concepts we know to be true first let s review some important implications of rigid motions and rotations

an isosceles triangle cannot be congruent to a triangle that is not isosceles because rigid motions map segments onto segments of equal length and the lengths of an isosceles triangle differ from those of
